

Market Trend and Scope

- Trending UI Tech stack is HTML and SASS , where SASS is a CSS pre-processor which brings to us the features of making functions, mixins, variables, arrays to make CSS code highly re-usable. Developing and maintaining a repository of common elements across website like buttons, links, modals, fonts, forms etc.
- Trending Front-End tech stack is ReactJS and AngularJS to maintain re-usable components across the website and consume APIs and it's data.
- Trending tools on which the style guides are deployed by the graphic designing team are zeplin, avocode, invision etc. which are easily readable and provide copy-paste option for css styles snippet.
- Scope Of UI and Front-End is so bright and wide in near future that newer tech stacks like VueJS and many other handy and highly compact yet functional JS frameworks are being manufactured and launched rapidly. Along with the same, CSS4 is also being supplied with newer attributes and values to minimize the need of JS on UI-front.
