

# What is UI development?

- UI : User Interface , refers to the intermediate between a user and an application. In the Previous times, this intermediate often used to be command line (much alike CMD) but in the modern times , this intermediate is highly graphical in nature.
- Development: the process of making something.
- UI Development: Making an intermediate which helps users to interact and communicate with a web-based or mobile-based application.
- Process Of Making/Development: Technologies like HTML (Hyper Text Markup Language), CSS (Cascading Style Sheet), Javascript etc. are the part of toolkit to begin making such an interface/intermediate.
- Examples: the home-page of flipkart webiste/app, the dialog box that appears while installing a software, your desktop and it's accessories, social-media webistes/apps etc.
- Advanced Scope of UI Development: Responsive Web Designing , refers to compatibility of UI elements view w.r.t different devices like IPad, mobile-phones, laptop-screens, etc.
